Engineering at Illinois IT Governance Executive Advisory Committee Meeting Minutes
September 23, 2014
4:30-5:50 pm
302 Engineering Hall

Attendees:
Steve Franke (chair), Dan Bodony (chair, Research IT Working Group), Indy Gupta (chair, Education IT Working Group), Kris Williams (chair, Administrative Working Group), Chuck Thompson (ex officio), Jim Hurst (ex officio), Bruce Vojak

Guest: Andreas Cangellaris

1. The Dean reviewed the many lessons learned from the initial implementation of Engineering IT. Recommendations from the external review held in Fall 2013 and from Engineering IT Governance and Research and Education working groups were used to define additional investments that are now being made. It is now very important to monitor the impact of our investments with the goal of shaping Engineering IT into a sustainable and successful infrastructure for the College of Engineering. Oversight will be provided by the three IT Governance working groups, and specific recommendations from the working groups will be forwarded to the Dean after coordination by the IT Governance Executive Advisory Committee. Engagement with the rest of campus will be important so that Engineering is able to leverage campus investments and avoid needless duplication of effort.

2. The Dean requests that the Executive Advisory Committee coordinate an assessment of Engineering IT to be delivered at the end of the academic year.

3. The committee discussed the relationship between NCSA and Engineering IT. The Dean expects that Research working group will be asked to consider specific opportunities for coordination/collaboration with NCSA in the near future.

4. The Dean explained that there is likely to be significant activity related to development of MOOCs for Coursera in the near future. The Education working group will likely be asked to assist with this.
